

I was born in Dallas, Texas, but have lived all over the country. I got my undergrad in Environmental Science with a concentration in soils and land use from Delaware Valley University in Philadelphia, PA in May of 2022. Upon graduation, I started my career with the USDA NRCS as their Area Resource Soil Scientist and Natural Resource Specialist. I enjoyed my time and gained a lot of experience working in the Black Hills of South Dakota and helping teach landowners about the importance of soil health. I then decided to pursue a graduate degree at NDSU in Fargo, ND in Natural Resources Management. I braved the ND cold and upon graduation in May of 2026, landed a job here in Cheyenne as the Resource Specialist for the conservation district! I have a great love and appreciation for our natural resources and can talk your ear off about soils all day long, and I really enjoy getting to work with landowners to address concerns with their property. In my spare time, you can find me hiking in the mountains, fishing, reading a good book, or playing with my labrador puppy.
